

JustAMP

Crystal
Whisper
Technology

JustAMP Digital Amplifier is the world's first digital amplifier with Crystal Whisper Technology. Using state-of-the-art digital technology, JustAMP offers new and superior features.

- **Easy to use.** JustAMP is as easy to use as a transistor radio or portable CD Player.
- **Contents.** JustAMP is shipped complete with a headset microphone, hand microphone, rechargeable battery, battery charger, and lanyard.
- **Crystal Whisper Technology.** The engineers at JustMed, Inc. have developed a digital process for recognizing air noise and reducing or eliminating it on the amplifier. This allows the user to place the microphone very close to the mouth. Whisper voices associated with Parkinson's, Multiple Sclerosis and ALS are clearly amplified.
- **Full spectrum voice.** The digital processes in JustAMP recreate the total voice. Analog amplifiers remove portions of the spectrum to eliminate feedback. JustAMP can be used at full volume and have it within 6 inches of the microphone. Your voice does not have to come from your waist.
- **Digital speech enhancement.** Computer automatically controls the volume of voiceless consonants and air rush noise, which creates better clarity.
- **Phone adaptation.** JustAMP is capable of plugging into a standard wireless phone or cell phone and allow hands-free use of the phone. This specially designed cable by JustMed, Inc. is now available.
- **Rechargeable battery.** JustAMP comes with a long-life, rechargeable battery pack, which provides 10-20 hours of continuous talk time. JustAMP also allows the user to use 3 standard AA batteries in place of the rechargeable battery pack if such an occasion is needed. This is a very important feature when recharging is not available.
- **Size.** JustAMP will fit into a man's shirt pocket, or easily hang on a lanyard around the neck.
- **Weight.** JustAMP weight is just over 9.5 oz, almost half the weight of the leading personal amplifier.
